

Fennek 50 and 80

The **Fennek** is available in a vertical model the Fennek 50 and a horizontal model the Fennek 80.

They are designed by the famous Dutch designer Roderick Vos.

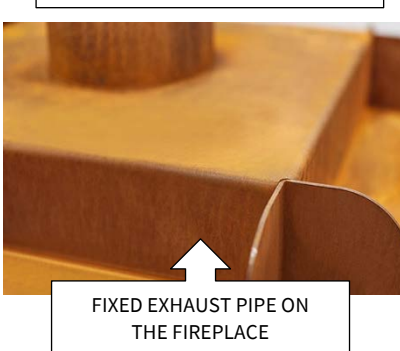

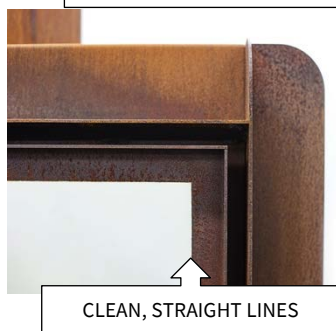

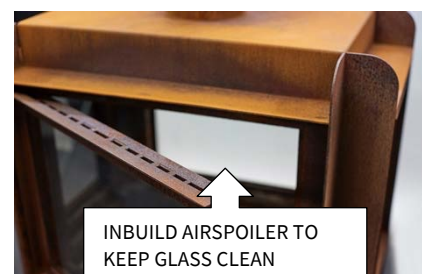

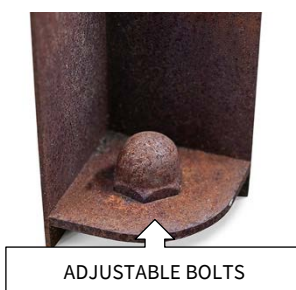

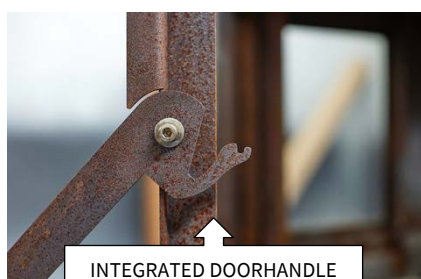

Roderick used clean and straight lines for the design. Made of 3mm CorTen steel.

They are available with 3 sided and 4 sided glass. The 3 sided model is always with a closed backside with concrete stones.

Since there are air spoilers above each window they remain nice clean during burning.

On the topplate of the Fennek a small piece of pipe (20 cm) is welded, the standard delivered exhaust pipe will fall over this piece. So rainwater cannot come into the burning room with this closed pipe connection.

The **Fennek** is a closed fire and has a flue of 2 meters so you do not suffer from smoke, fire sparks and ash on the terrace.

Technical information

- Material* - 3mm CorTen steel and heat resistant glass and bottomstones
- Dimensions* - Fennek 50 : 56 x 56 x 303 cm (lxwxh)
